

Cliff Notes: 4.4 Co-inherence

Co-inherence names the relation in which obedience, internalisation, and performativity appear together and derive meaning from one another.

CLAIM

The three themes are co-inherent

Obedience, internalisation, and performativity are not separate definitions. They are dimensions of one conceptual field.

WARRANT 1

Participants move among them

Single accounts move between enforcement, learning, display, internal formation, and what remains when observation recedes.

WARRANT 2

Each theme needs the others

Obedience cannot show internalisation. Internalisation cannot show recognition. Performativity cannot show durability.

INSTABILITY

Productive but unstable relation

Participants value durable discipline but often judge it through visible, immediate, inspectable signs.

LIMIT

Claim limited to RQ1

Co-inherence explains how educators conceptualised discipline. It does not

NEXT MOVE

Bridge to operationalisation

The next question is how this co-inherent concept is put into daily NSC practice in

Co-inherence claim

Discipline is conceptualised as a structure in which obedience, internalisation, and performativity appear together. Each dimension clarifies and destabilises the others.

One-line argument: co-inherence explains why discipline in RQ1 is best read as commanded, carried, and displayed at once.
